# Paper Name: Python Programming
# Paper Code: S2CS230411P

B. Sc. (Computer Science)

Session 2025-2026

Assignment

Date: 25th. February, 2026

# Exercise

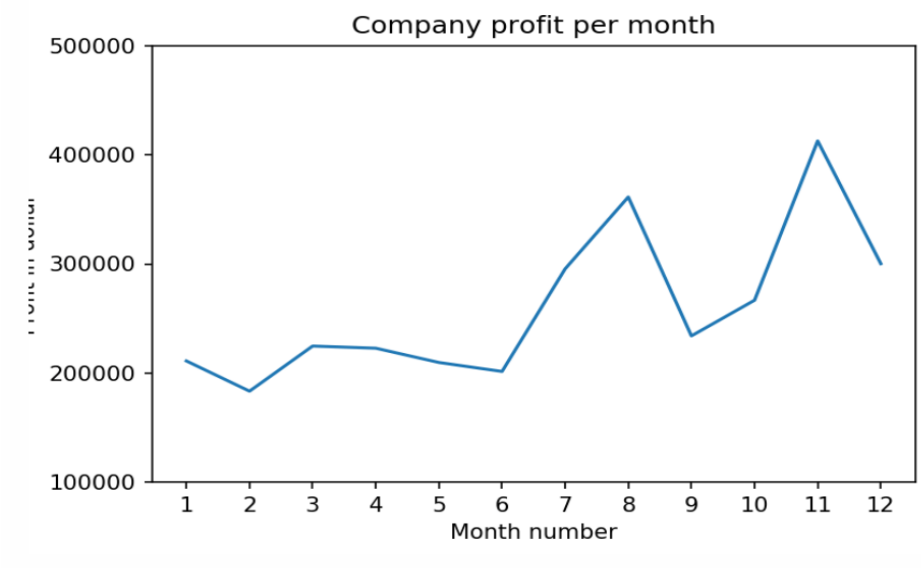
**Use the company_sales_data CSV file for this exercise. Read this file using Pandas and perform the following:**

1. **Read Total profit of all months and show it using a line plot. Total profit data provided for each month.** Generated line plot must include the following properties: –

X label name = Month Number

Y label name = Total profit

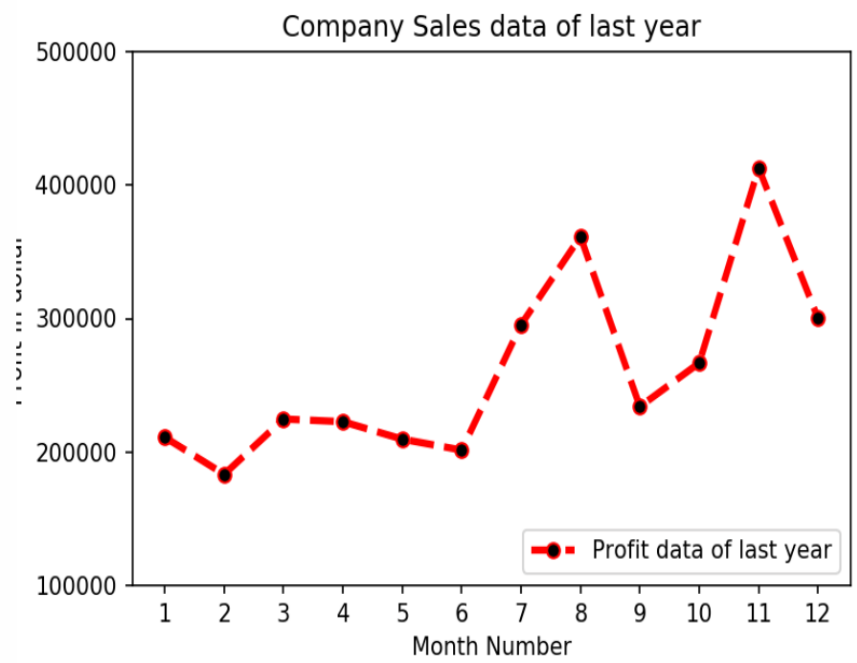
The line plot graph should look like this.



2. **Get total profit of all months and show line plot with the following Style properties**

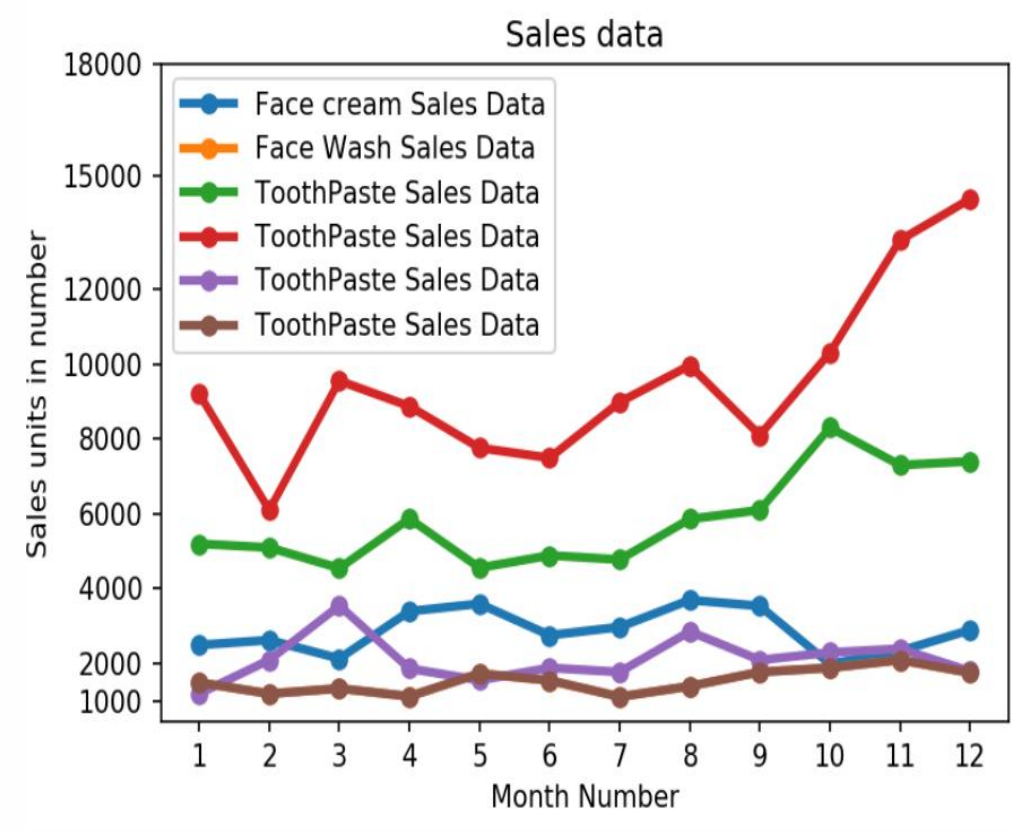
Generated line plot must include following Style properties: –

- Line Style dotted and Line-color should be red
- Show legend at the lower right location.
- X label name = Month Number
- Y label name = Sold units number
- Add a circle marker.
- Line marker color as read
- Line width should be 3



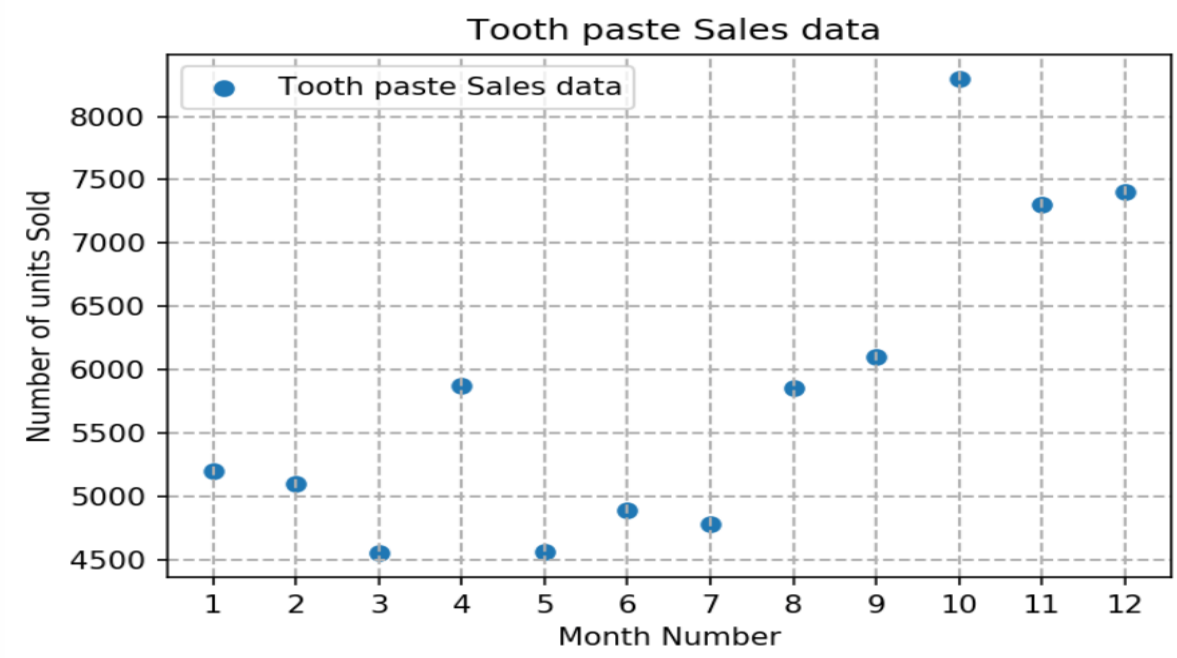
## 3. Read all product sales data and show it using a multiline plot

- Display the number of units sold per month for each product using multiline plots. (i.e., Separate Plotline for each product ).



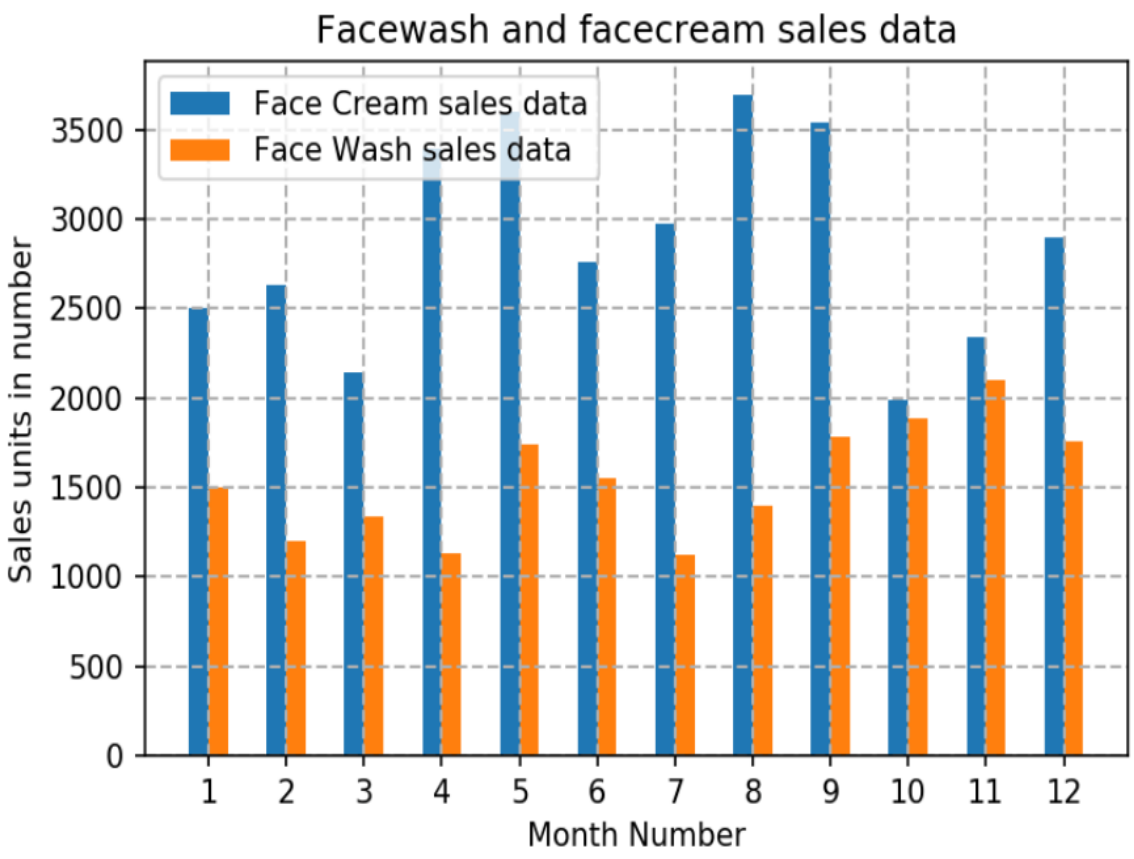
**4. Read toothpaste sales data of each month and show it using a scatter plot**

Also, add a grid in the plot. gridline style should "–".

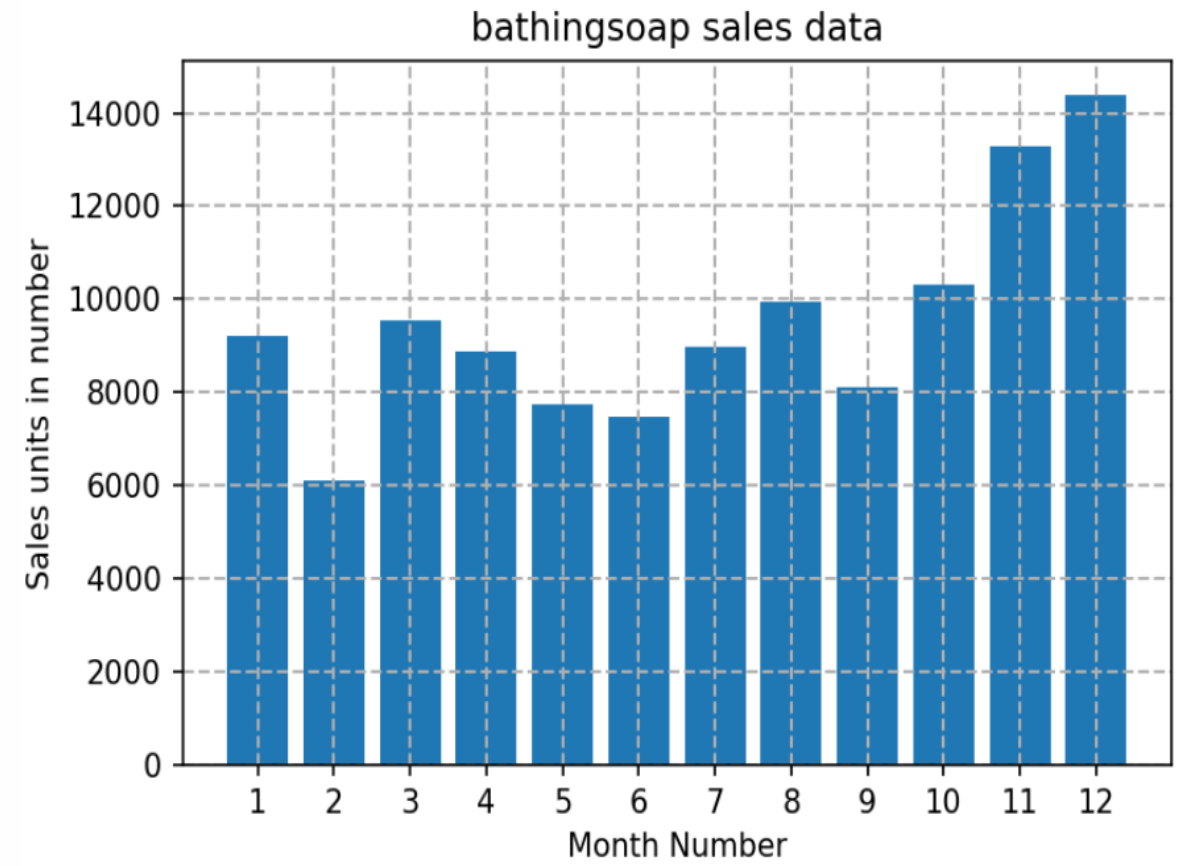


**5. Read face cream and facewash product sales data and show it using the bar chart**

- The bar chart should display the number of units sold per month for each product. Add a separate bar for each product in the same chart.

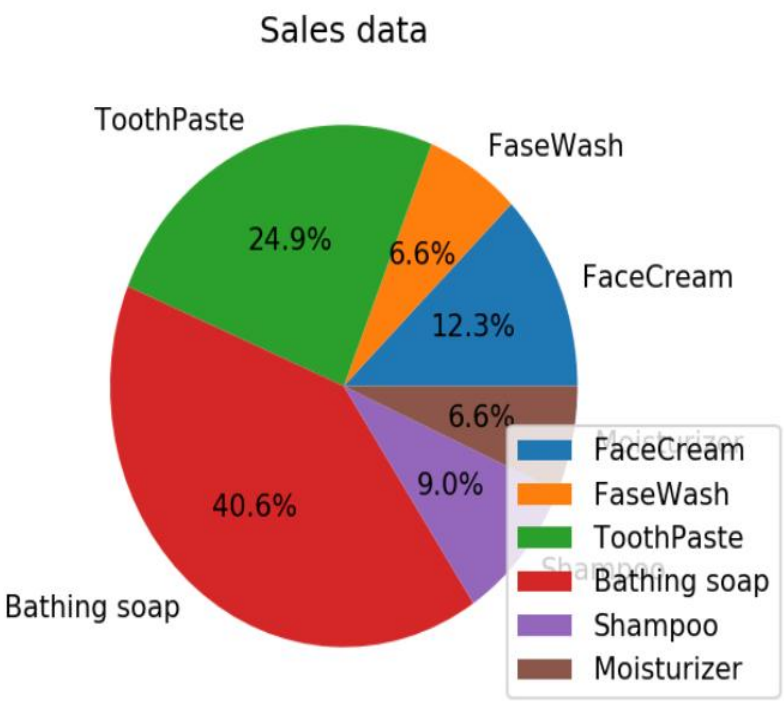


6. **Read sales data of bathing soap of all months and show it using a bar chart.**

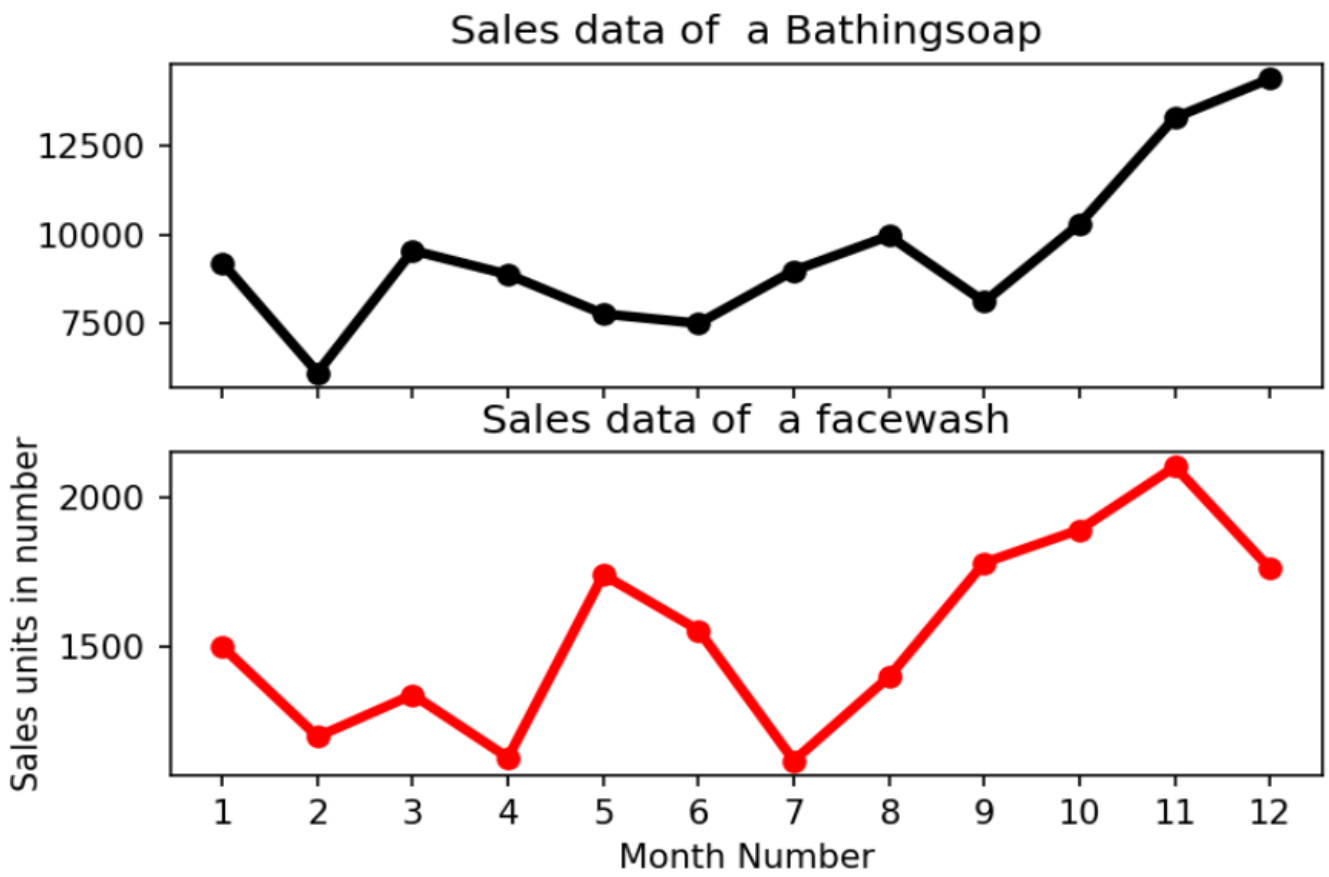


**7. Calculate total sale data for last year for each product and show it using a Pie chart**

- **Note**: In Pie chart display Number of units sold per year for each product in percentage.



8. **Read Bathing soap facewash of all months and display it using the Subplot**



# Thank You
